## FOUR REASONS TO ORDER A POWER MAC™ 7200 NOW!

## PCI EXPLAINED

PCI is a self-configuring computer local bus that's supported by most major computer manufacturers. It's technically superior to VESA's local bus, and runs at a faster 33MHz. PCI is used on Pentium, PowerPC and Motorola 690x0 series architectures.

### So why would you want a PCI machine?

First, it's faster than Apple's old local bus, NuBus. Second, it's compatible with hundreds of PC cards you can use to easily expand your system. And finally, it's less expensive than NuBus. All in all, it's a big leap forward in computer technology.

❶ Both the 7200/75 and 7200/90 come standard with 1MB of video RAM which you can easily expand to 4MB for vibrant 24-bit color at 1024 x 768 pixel resolution.

❷ Beneath the "hood" you'll find a PowerPC 601 RISC processor with integrated math co-processor and 32K on-chip cache. Translation? Speed to burn.

❸ Slip a CD-ROM into the internal AppleCD 600i 4x CD-ROM drive and entire libraries of information are at your fingertips. Now you can easily fill your reports, presentations and proposals with the persuasive power of facts and statistics.

❹ Wait till you hear CD-ROMS, multimedia presentations and QuickTime video in the Power Mac 7200's 16-bit built-in sound!

Keyboard and Monitor sold with selected bundles only. See pages 37-38 for our full line of Apple monitors and keyboards!

# Memory Prices Plummet

## *BUYER BEWARE!*

### *A Few Well-Chosen Words to the Wise About Buying Memory.*

These days, buying memory is a lot like playing the stock market. Prices fluctuate almost on a daily basis. Don't be fooled by screaming colors and the overhyped "we-have-the-lowest-prices-on-memory" advertising used by some companies. We believe we have some of the best prices on memory that you'll find. We invite you to shop around. Then call us. We think you'll be pleasantly surprised by our everyday low prices.

### *How to Order the RAM That's Exactly Right for Your Computer*

Probably the single best investment you can make in your computer is adding more memory. Installing more RAM means you can run the latest *memory-hungry* applications and take advantage of all of their advanced features. And, with more memory in your computer, you'll find multitasking is much easier. Generally, you'll also find everything speeds up. So you get lots more done in lots less time.

If you use the handy charts below (and on the next two pages), choosing the right SIMMs and DIMMs for your machine is pretty easy. Just follow these simple steps:

. Locate your computer model in the first column of the chart. (The number in parentheses below your model name is the amount of RAM your computer originally came with.)
. Choose your RAM upgrade by looking at the second column.
. Then check the third column for the exact number and *description of the* SIMMs or DIMMs you'll need.
. The fourth and fifth columns give you the item number and price for the SIMMs and DIMMs you've chosen.
. Call today to order the SIMMs and DIMMs you want and you could have more memory installed in your computer by tomorrow.

## How to Avoid Carpal Tunnel Syndrome

It's estimated that 1 in 8 US workers will suffer from repetitive stress injuries this year. It's particularly common among keyboard and mouse users. You can help avoid the pitfalls of carpal tunnel syndrome (including pain in your hands, numbness in your fingers and arm pain) by doing the following:

- ➤ typing with your wrists, elbows and waist at a 90 degree angle
- ➤ rest your feet flat on the floor
- ➤ take 10 to 15 minute keyboard breaks every hour
- ➤ invest in an ergonomically-correct keyboard, a wristguard or even a cordless mouse

## How to Avoid Carpal Tunnel Syndrome

It's estimated that 1 in 8 US workers will suffer from repetitive stress injuries this year. It's particularly common among keyboard and mouse users. You can help avoid the pitfalls of carpal tunnel syndrome (including pain in your hands, numbness in your fingers and arm pain) by doing the following:

- ➤ typing with your wrists, elbows and waist at a 90 degree angle
- ➤ rest your feet flat on the floor
- ➤ take 10 to 15 minute keyboard breaks every hour
- ➤ invest in an ergonomically-correct keyboard, a wristguard or even a cordless mouse
